

# **Boeing, BMT team for Navy maritime communications system project**

**BRISBANE, Aus., November 2, 2022** - Boeing [NYSE: BA] Defence Australia and BMT are partnering to provide the Royal Australian Navy (RAN) with a modern maritime communications system, under Project SEA1442 Phase 5.

The teaming partners will deliver the RAN an integrated, interoperable and resilient system to enhance their wireless information exchange capability.

Boeing's pedigree in developing complex communication systems for the deployed military environment, combined with BMT's demonstrated experience in maritime engineering will provide the RAN a flexible system with advanced evolving technology to meet their needs for the coming decades.

"Our collaborative partnership offers a seaworthy, sovereign communications system that will enable Navy to fight and win at sea," said Scott Carpendale, vice president and managing director, Boeing Defence Australia. "Our solution creates opportunity for Navy to become part of a fully-integrated Australian Defence Force-wide system, with access to coalition interoperability."

"The combination of Boeing's fielded technology, collaborative development approach and BMT's maritime design expertise, technical assurance and extensive knowledge of RAN platforms will ensure the rapid delivery of this combat-ready communications capability," he said.

As the Prime Systems Integrator, Boeing Defence Australia's design and network expertise is operationally-proven across networked operations in denied, degraded, intermittent and limited bandwidth environments in multiple domains.

The locally designed and manufactured solution contains more than 90 percent Australian content underpinned by the use and uplift of new and existing Australian suppliers.

"As the maritime engineering partner, BMT in Australia brings local expertise to Boeing's sovereign maritime solution for SEA1442 Phase 5," said Graeme Nayler, Regional Business Director, BMT.

"BMT are proud of the long history we have in supporting Australia's and our coalition partners' naval capabilities, complex military platforms and weapon systems and our in-country experts play an active role in supporting shipbuilding, acquisition and sustainment enterprises to provide the best solutions for Navy."

## **Boeing in Australia**

After more than 95 years, Boeing Australia is the leading aerospace company in the region. Our 4000 employees work across the broadest aerospace portfolio in Australia, including advanced

manufacturing, defence, services, and research and development. We have a thriving Australian supply chain that supports our operations, and we're proud to partner with great organisations that support veterans, STEM and the communities we live and work in. As we look to the future, Boeing Australia is committed to advancing economic opportunity, sustainability and community impact. Learn more at [www.boeing.com.au](http://www.boeing.com.au).

## **BMT**

BMT is a leading international design, engineering, science, digital data technology and risk management consultancy with a reputation for excellence. We're driven by a belief that things can always be better, safer, greener and more efficient. Delivering independent, complex design and consultancy capabilities and services for over 30 years, we pride ourselves on being equipped to support our clients to tackle the most complex design and systems issues, and challenges, which enables the industry to deliver safer, cleaner and more fuel-efficient shipping for the future. We draw upon a wide range of experience and expertise to provide high-quality, high value products and services across the maritime sector. The group's assets are held in beneficial ownership for its staff [www.bmt.org](http://www.bmt.org).
